

BenchPrep Technical Challenge

For this technical challenge we will have you automate various scenarios for a small website.

<http://puppies.herokuapp.com/>

You may use any web automation framework of your choice.

You have 5 days to submit this task. Feel free to ask questions during the challenge.

Scenarios:

1. Simulate and confirm the adoption transaction of one puppy.
 - a. Do not include **additional products and services** in the transaction
2. Add two puppies to the cart
 - a. Do not include **additional products and services** in the transaction
3. Simulate and confirm the adoption transaction of two random puppies
 - a. Include the first two **additional products and services** for each puppy

Please confirm total base cost are accurate for each adoption.

When Complete:

Zip up your project and include a .txt file with instructions on how to install your framework, how to execute the tests and send to qa@benchprep.com
